The Solution to Growing Your Millwork Business

Cost Estimates

Millwork is one of the most difficult construction trades to estimate accurately. Our estimates are detailed and thorough. All of our estimators have both hands-on fabrication as well as estimating experience to call upon.

We will work with you to establish pricing that is based on national averages and adjusted to suite your unique company needs.

We provide a breakdown analysis sheet on the estimate that you can use for your pre-bid review. We also provide a material and labor report for your project managers to use during project execution.

How it works:

1.

You send us the plans and specs for your next millwork project

2.

We send you a quote for our cost to do a full, accurate, take-off and estimate for your project

3.

Once approved we'll start your estimate. We will work with you to establish pricing used in estimate

4.

We review the project and send you a list of questions you can use in your RFI process

5.

We send you a full millwork cost estimate as a spreadsheet and a full set of marked up plans

6.

You submit your bid to the General Contractor and win the next big project for your company!!!!

What you receive:

List of questions for RFI purposes

Detailed take-off in MS Excel format

Highlighted and organized set of PDF plans

Breakdown cost of each line item

Cost estimate customized to your company's labor rates, overhead & profit

Summary sheet analysis of costs, labor & materials
